

# Unwavering Commitment to Quality

## LP® SmartSide® siding and trim

Long lasting protection against rot, fungal decay and termites

- We use galvanized ring shank nails to fasten our siding – they last longer, do not rust, and are more durable than staples.

## premium lumber

Stronger and straighter walls

- 2"x4" Studs (not 2"x3")
- Double top plates

## taller walls

Taller walls means more space!

- The Shed Yard has some of the tallest wall heights in the industry.

## did you know ?

*A roof is optional and costs extra with some companies!*

## roof system

- 30-Year architectural shingles\*. Same quality as used on your homes.
- Higher wind rating and better looking!
- Your animals will thank you for not using metal. Metal is noisy and scary for them!
- Engineered trusses – designed to meet a high snow load and strong wind speed. The Shed Yard uses steel gussets. Other companies may use wood gussets, which often do not meet snow load requirements.
- Roof drip edge prevents water from getting behind the faceboard.
- \*Except for our Cottage line, which is metal.

## vents included

Airflow in every building

## foundation and sub floor

Weather-resistant

- 4"x4" Pressure-treated runners will not rot or rust.
- 16" on center joists set on top of the runners keep the floor away from the moisture in the ground. Other companies may use steel joists set on the ground (which can rust), spaced 24" on center (which may lead to a sagging floor).
- Our floor joist system allows siding to be nailed every 6" to 8" around the bottom to keep out pests and moisture.
- Sub floor is washable and strong. It is the best in the industry: water-resistant and engineered; environmentally friendly.

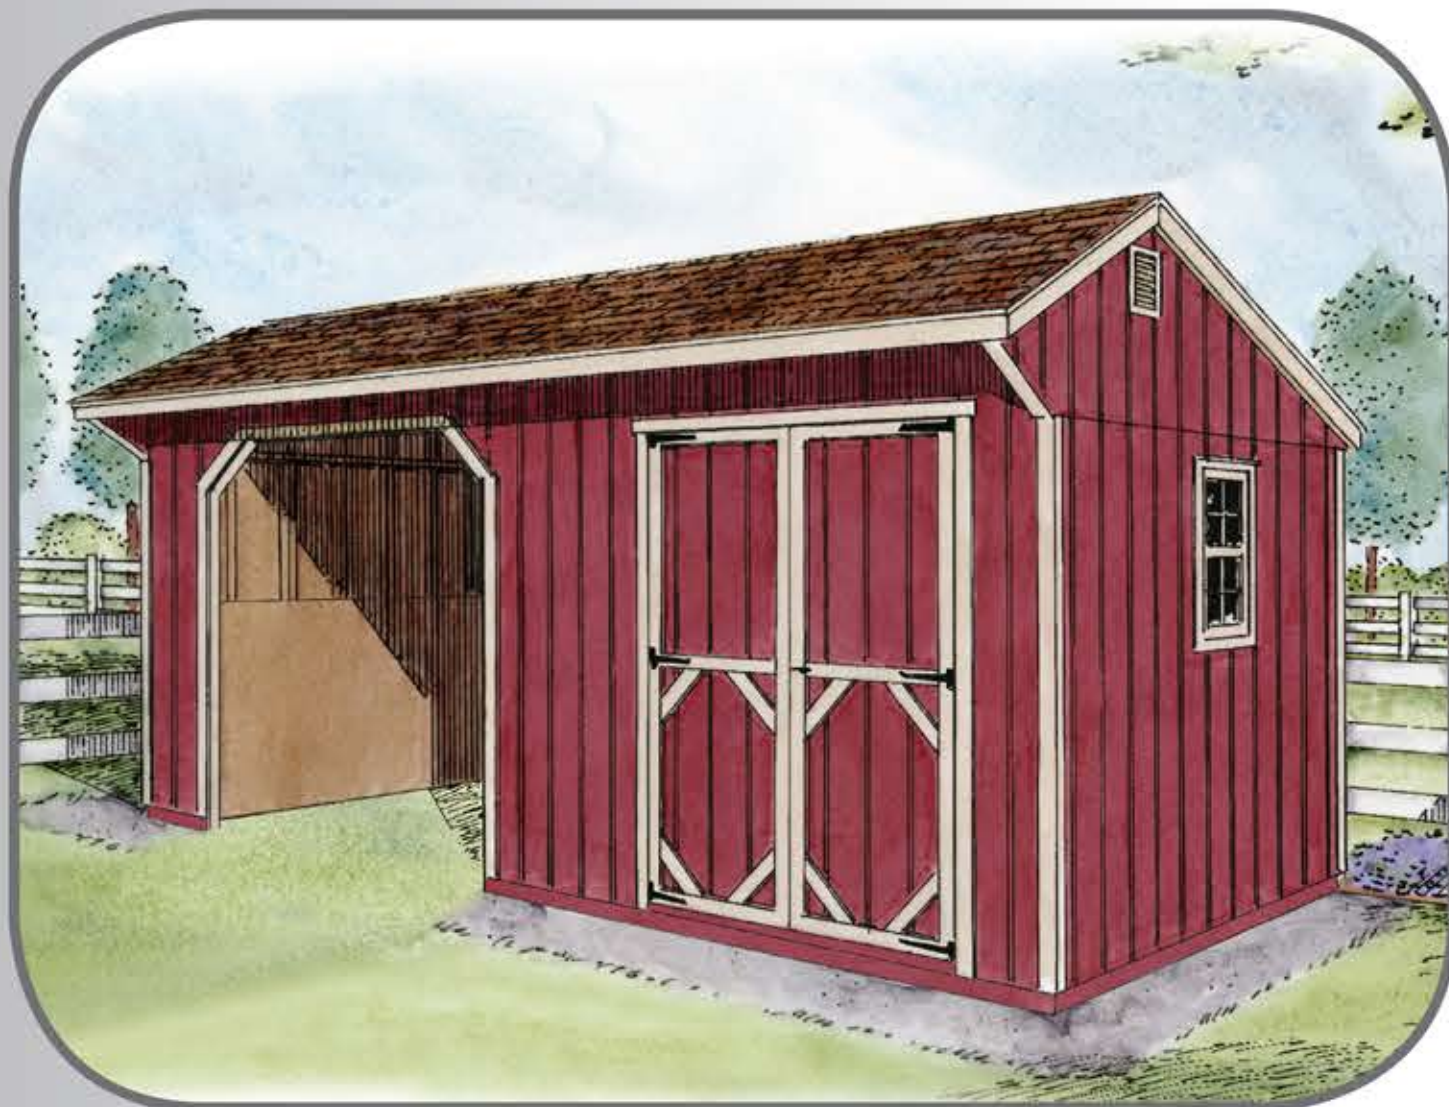

## tall doors

No more bumping your head with our tall doors!

- 4' Single doors tend to sag and warp over time so ours are built 3' single and 5' double for structural integrity (other sizes and styles available).
- Keyed locking latches.
- Wood door frames are designed with corner braces, and are screwed together for longer lasting doors.
- Prehung steel doors are insulated.
- Aluminum threshold (included) protects the doorway and floor when taking things in and out.

Our Sub floors are strong!

## did you know ?

*A floor is optional and costs extra with some companies!*

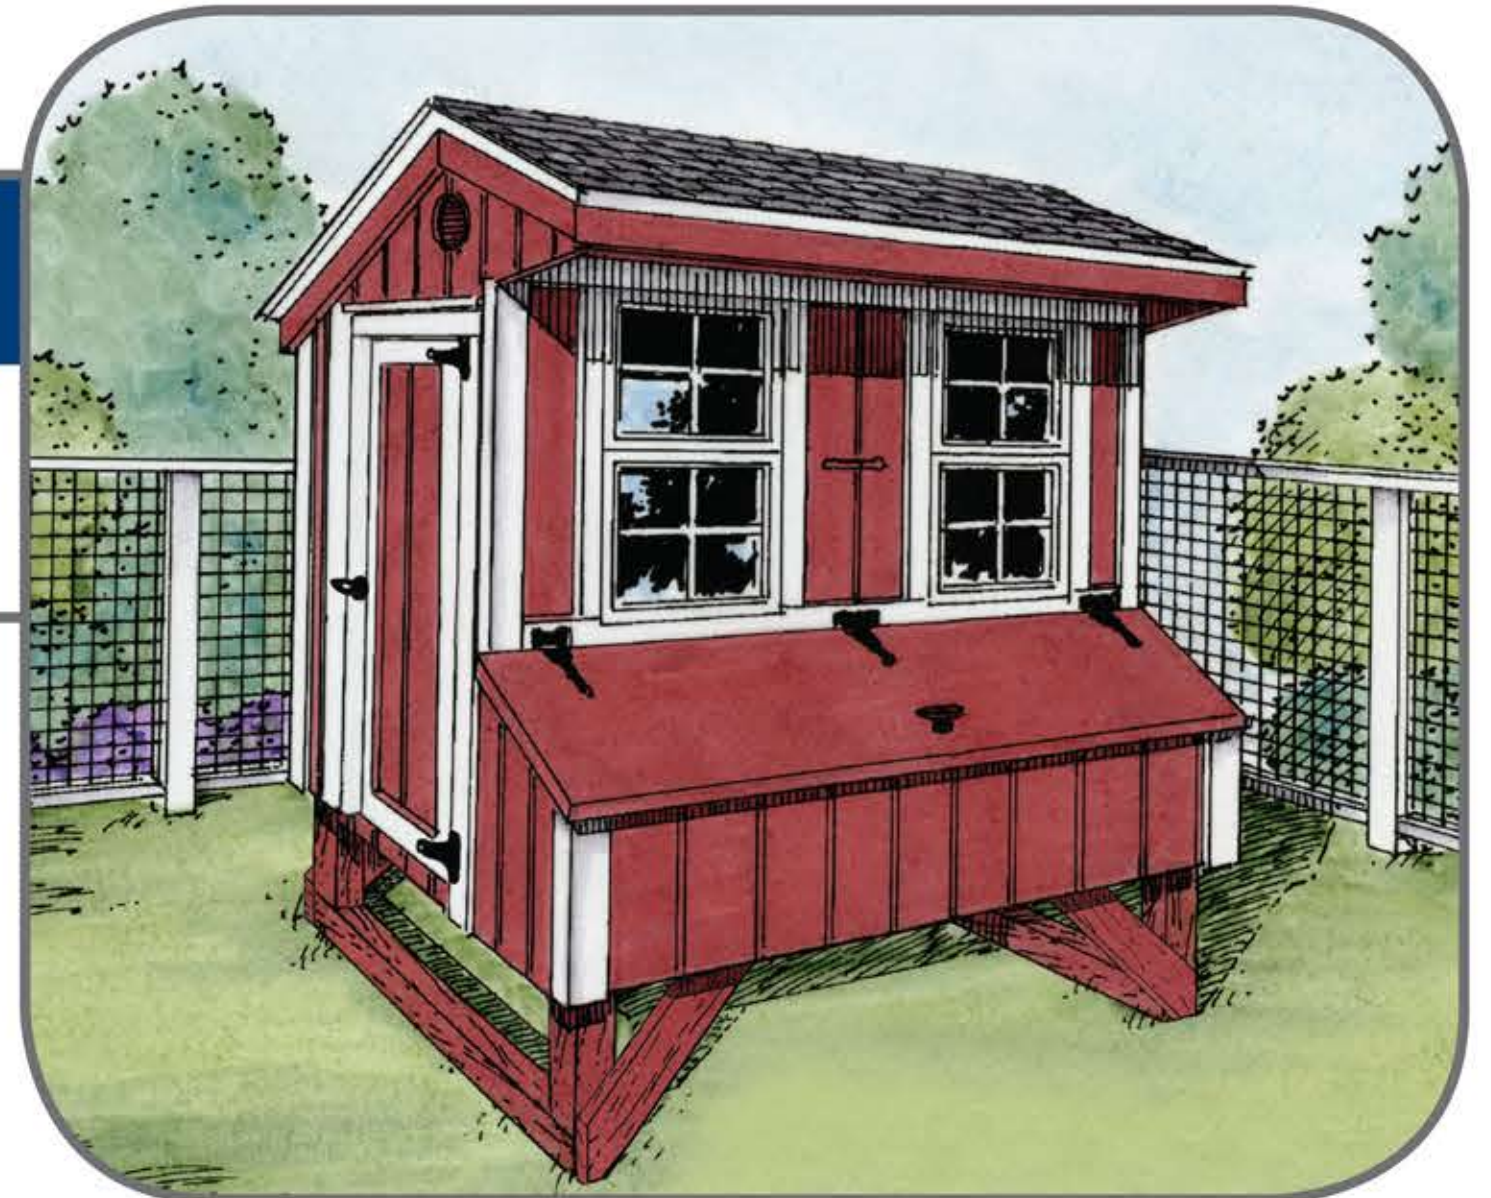

## did you know ?

*Paint is a standard feature on all our buildings with many colors to choose from!*
